Server Sprawl + Exploding Storage Costs: The Silent IT Crisis

20-30%

Orphaned Servers

Running without purpose but consuming resources

50-60%

Cold Data

Unused data still on expensive storage tiers

30%+

Budget Waste

Of IT budget consumed by infrastructure waste (Gartner)

⚠ For a $100M IT spend, that's **$30M in avoidable cost** every year.

What is Server Sprawl?

- Unplanned Sprawl: Systems multiply without strategy.

- Hidden IT: Departments create isolated infrastructure.

- Permanent "Temporary" Environments: Test systems stay live indefinitely.

- Merger Mayhem: IT not consolidated after acquisitions.

End result ->Thousands of workloads running in the background, many underutilized or forgotten entirely.
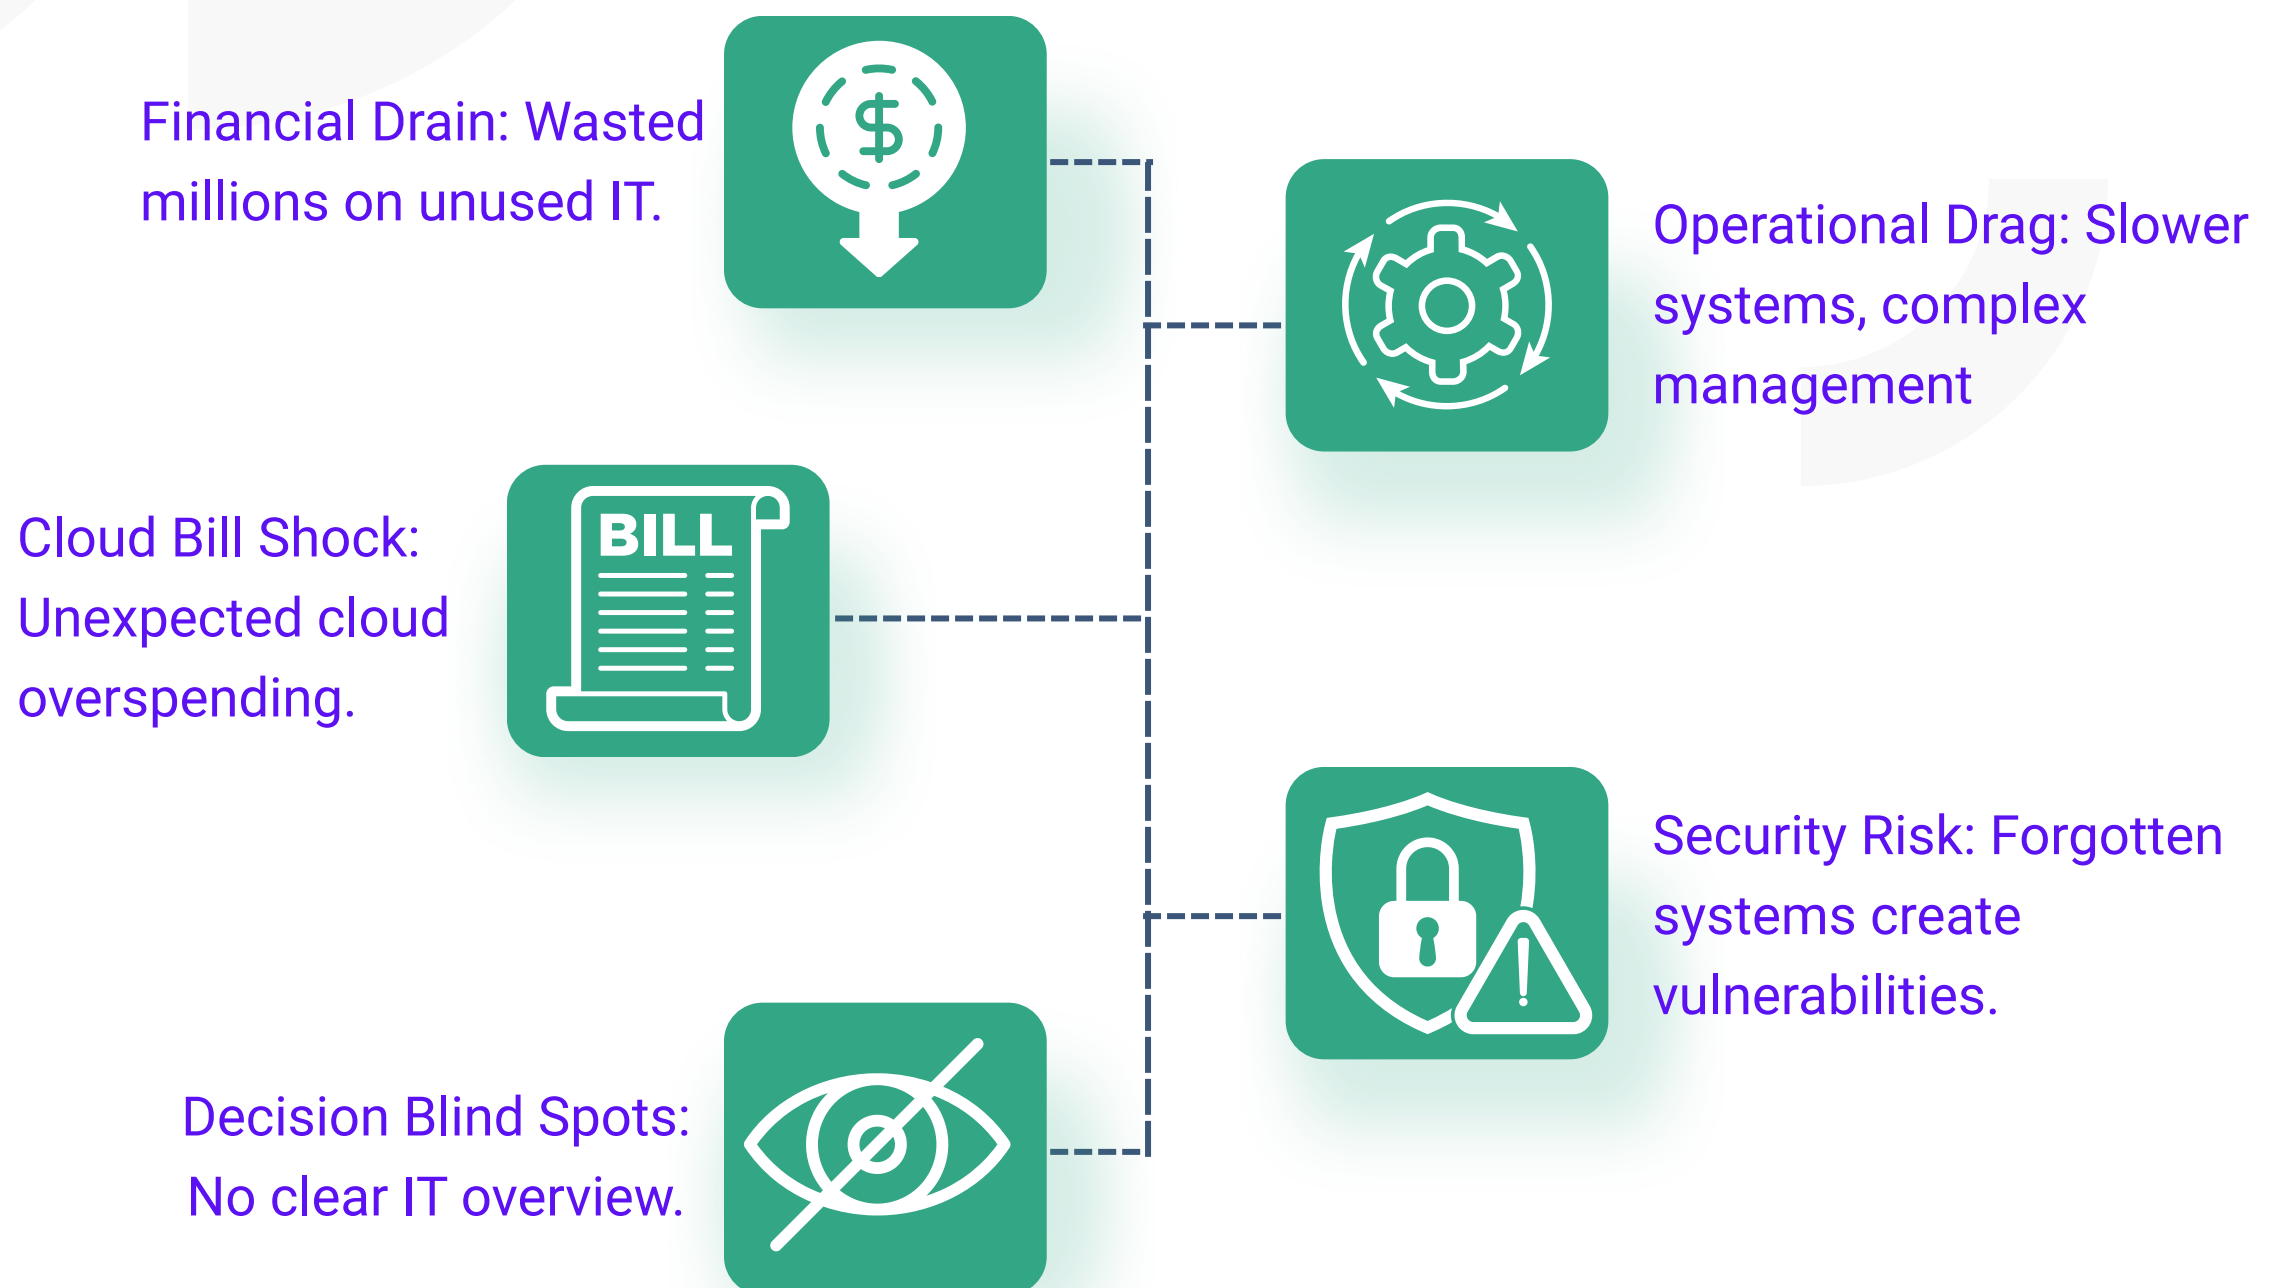

Why Storage Costs Are Escalating

- **Bloated Data:** We keep endless copies and old files that no one uses, taking up valuable space.

- **Wasted Storage:** We buy more storage than we need, leaving much of it empty but still paying for it.

- **Hoarding Habit:** We're afraid to delete anything, so old data piles up indefinitely.

- **Inefficient Storage:** We mix active data with rarely used data on expensive, high-performance storage, wasting resources.

The Impact on Enterprises

Financial Drain: Wasted millions on unused IT.

Operational Drag: Slower systems, complex management

Cloud Bill Shock: Unexpected cloud overspending.

Security Risk: Forgotten systems create vulnerabilities.

Decision Blind Spots: No clear IT overview.

These challenges compound over time, creating a snowball effect that's increasingly difficult to address.

What Happens When You Solve This

Immediate Savings

Consolidation & propoer tiering cut millions from OPEX within the first quarter

Faster Systems

Less clutter = better performance across all business critical applications

Lower Risk

Fewer attack surfaces, better compliance posture, reduced audit findings

Smarter Planning

Clear visibility drives better infrastructure invesmtment decisions for the future

These benefits compound over time, creating a positive feedback loop of efficiency and optimization

If you could shine a light on every hidden cost, unused server, and idle dataset...

# ...wouldn't you?

SPOTLITE

is built for this.

Our enterprise-grade solution gives you comprehensive visibility into your entire infrastructure footprint - on-prem, cloud, and hybrid.
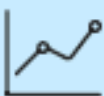

See the Invisible

Discover forgotten assets and wasted resources with AI-powered scanning

Take Control

Implement automated governance and right-sizing recommendations

Cut Costs

Reduce infrastructure spend by 25-40% within 12 months

You can't optimize what you can't see.

Take the First Step Toward Infrastructure Clarity.

Message us today to learn how SPOTLITE can transform your infrastructure management.
